

Shifting Gang **FED-9012**

Многопильный обрезной станок

A spline is provided on the spindle and Babbitt pads are used for the saw guide to eliminate conventional saw flanges. Adopting this system allows cutting of thick lumber with the use of a small saw. Moreover the saw guide having wide hold area, together with the effect of lubricating system effect, holds the saw at high accuracy enabling high-speed and heavy-duty cutting.

Возможна сложная обработка со скоростью 50 м. в мин.!
Долговечность дисковых пил обеспечивает вода, воздух и масло!
Легкая обработка даже твердых пород древесины!
Наличие новых механизмов обработки !
